

ABSTRACT OF THE DISCLOSURE

A recreational vehicle suite has a combination bed and sofa, a floor, a side wall and an end wall. A TV viewing screen is located in the proximity of the of the end  
5 wall for viewing from the bed and sofa.

A bench is supported on the floor and has a head portion and a foot portion. An elongated normally horizontal cushion/mattress is mounted on a top of the bench and normally covers the bench including the head and the  
10 foot portions. The cushion/mattress has a head portion normally covering the head portion of the bench and is hingedly connected to a foot portion of the cushion/mattress.

A power means is within the bench for tilting the head  
15 portion of the cushion/mattress upwardly at an angle with respect to the bench.
